[Prevalence of metabolic syndrome in schoolchildren aged 6 to 12 years in the urban area of the city of Salvador]. The aim of this study was to determine the prevalence of Metabolic Syndrome in a random sample of schoolchildren in the urban area of the city of Salvador, Brazil. A cross-sectional study was carried out in the urban area of the city of Salvador, with a multistage cluster sampling of schools. From the sample of 996 children, with a 95% confidence level, the prevalence of Metabolic Syndrome was 21.5% (95%CI: 17.5-25.6%). The prevalence of Metabolic Syndrome in children 6 to 9 years of age was 32.8% and in children 10 to 12 years of age was 16.9%. The prevalence of Metabolic Syndrome in children 6 to 12 years of age in the urban area of the city of Salvador was 21.5%, in accordance with the criteria established by the International Diabetes

Federation. A researcher at Cal Poly is urging the University of California to invest more in a research program to make understanding climate change more accessible to the public. Some faculty at the university are concerned that more resources may be necessary to prevent climate change from becoming a major factor in human-induced disasters, said David Medvigy, a professor of environmental and molecular toxicology. "What we've found is that climate change is accelerating in a way that is really at the heart of many societal challenges," he said. "If you really want to keep the economy going, if you want to keep the food chain going, if you want to keep the quality of life up, we're going to have to do something about the climate change."

Medvigy and his colleagues surveyed more than 1,000 people who had no scientific background about the risks of climate change, including an increase in heat waves, water shortages, droughts, and storms that lead to floods and soil erosion. He said their findings show that most people think the climate is changing, that many believe it is caused by humans, and that they expect it to have a negative impact on their lives. "It is a misconception that it's only the few 'lunatic fringe' people who believe
